

SOC Login Monitoring Dashboard (Splunk)

Overview

These SOC login monitoring dashboards were built in splunk to provide real-time windows authentication login activities.

1. Failed vs Successful Login Panel

This panel helps identify abnormal spikes in failed login which could indicate Brute-force attempts.

SPL Queries:

```
index=main sourcetype=csv "Event ID" IN (4624, 4625)
```

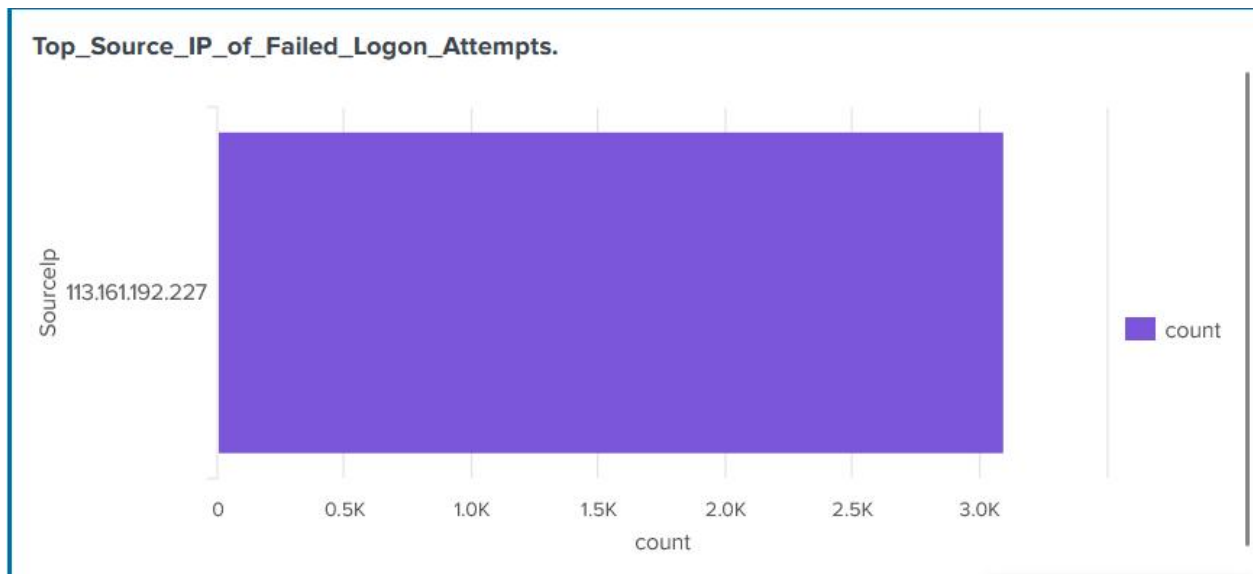

```
| eval status=if("Event ID"="4624","Sucesss","Failure")
```

```
| timechart count span=5m by status
```

2. Top Source IP Panel

This panel helps highlight external hosts IP address generating authentication failures, allowing analysts to identify and block suspicious

sources.

SPL Queries:

```
index=main sourcetype="csv" "Event ID"=4625 SourceIp=$ip_token$  
|stats count by SourceIp  
|sort - count  
|head 10
```

3. Most Targeted Accounts panel

This panel reveals the top target accounts generating logon audit failures, allowing analysts to take proper measures to protect and monitor the account for suspicious activities.

Most Targeted Account	
TargetUserName	count
administrator	3103

SPL Queries:

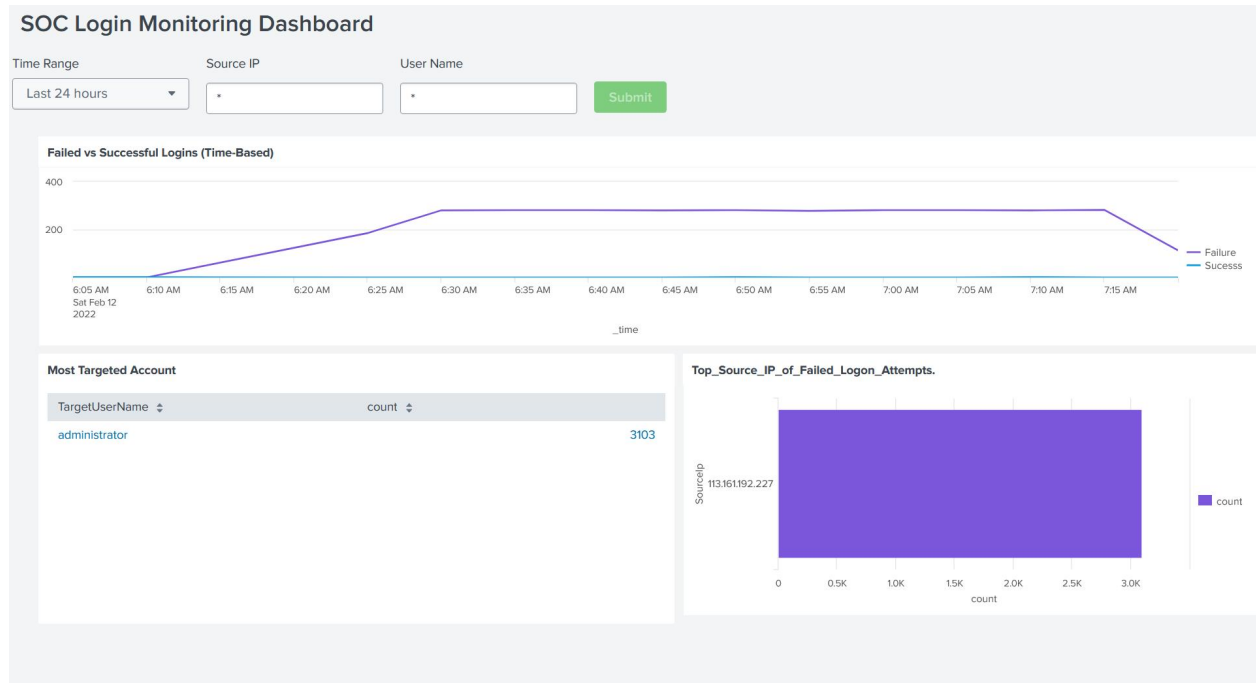

```
index=main sourcetype="csv" "Event ID"=4625
```

```
TargetUserName=$username_token$
```

```
|stats count by TargetUserName
```

```
|sort - count
```

4. Full SOC Login Monitoring Dashboard

Summary

This Dashboard supports Tier 1 SOC analyst by enabling rapid detection, investigation and escalation of authentication based threats.
